# PASSIVE INTER MODULATION FUNDAMENTALS

What is PIM?

PIM = Noise generated by the interaction between the multiple Tx signals and passive non-linear junctions in the RF path.

PIM generated products will affect received band (UL) by increasing the received Noise floor thus reducing base station sites coverage and capacity.

# MOTIVES

## PIM Sources

Non-linear metal-to-metal contacts:

- Loose RF connectors
- Poorly prepared RF cable terminations
- Improperly mated / misaligned parts
- Cracked / cold solder joints
- Loose mechanical fasteners (screws, rivets)

**Traditional sweep (RL or DTF) testing many times doesn't identify these problems.**

**PIM doesn't substitute the VSWR tests, they are as a complementary measurement.**

# EQUIPMENT

PIM Test Equipment

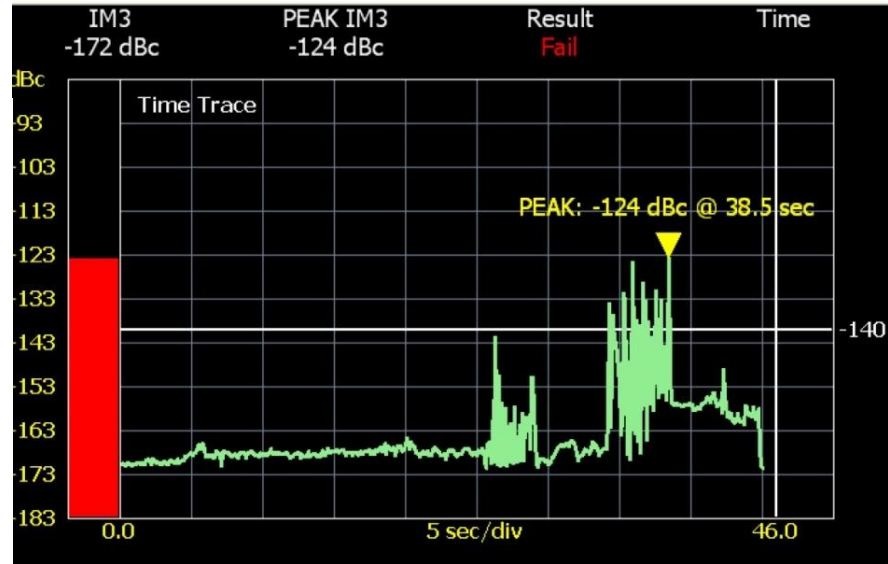

F1 → 2W/33dBm & 20W/43dBm

F2 → 2W/33dBm & 20W/43dBm

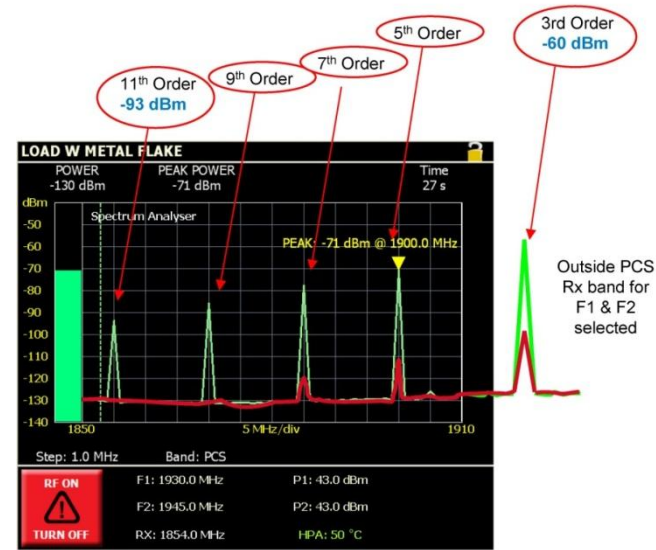

**PIM Test equipment transmits 2 frequencies at high power into the system under test and measures the magnitude of the interference generated at the known IM3 frequency.**

# RESULTS

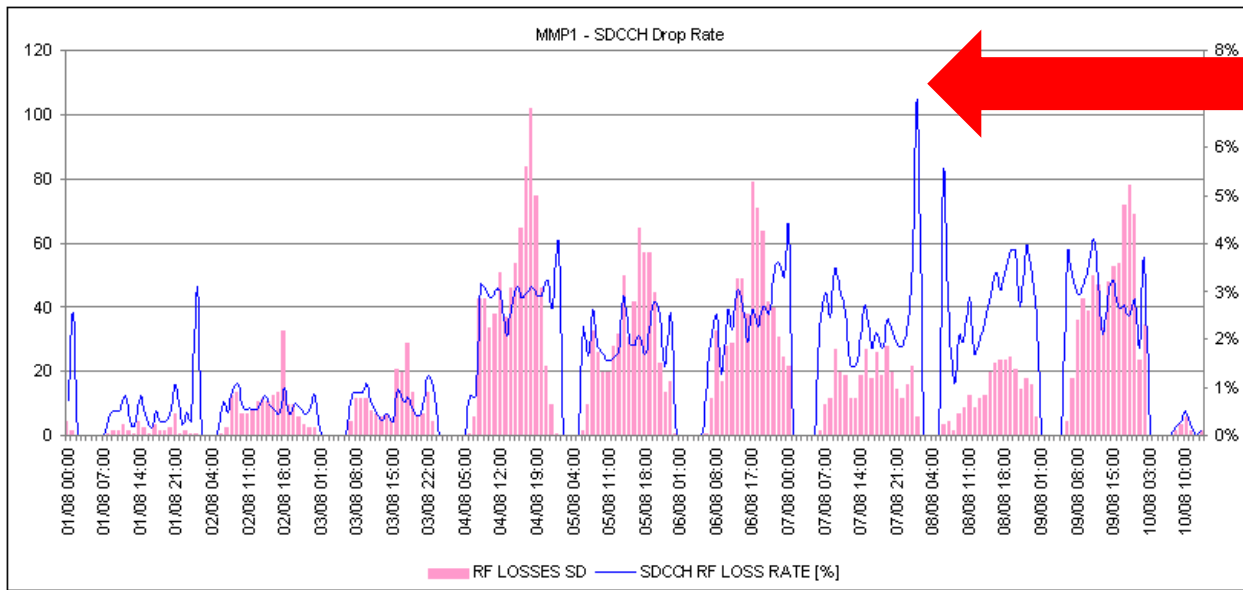

The fault location is found by “tapping” on interconnections and components (dynamic test) during the test looking for spikes in PIM magnitude.

Spectrum Analyzer Mode

Repairing IM3 reduces ALL IM products.

# CASE STUDY – METRO LISBON

**Before**  
7% of Drops at the  
BTS station

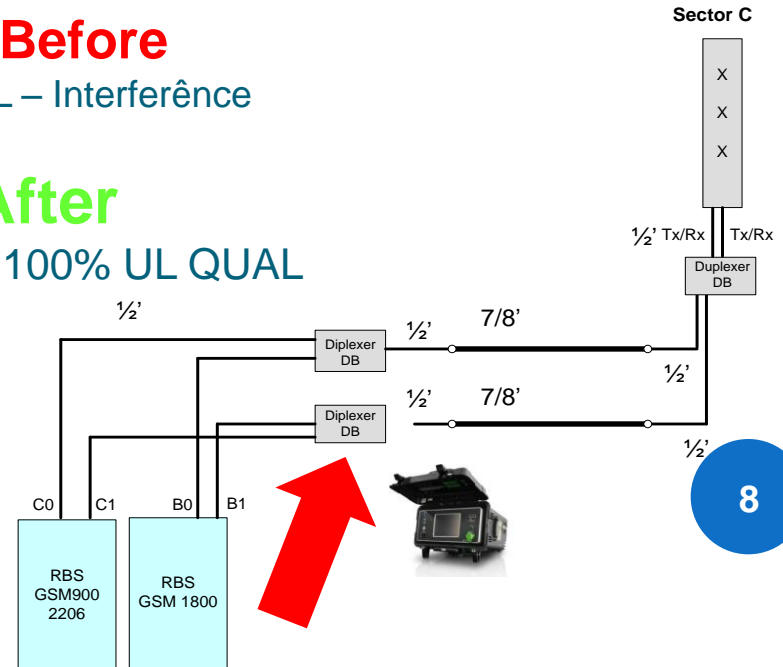

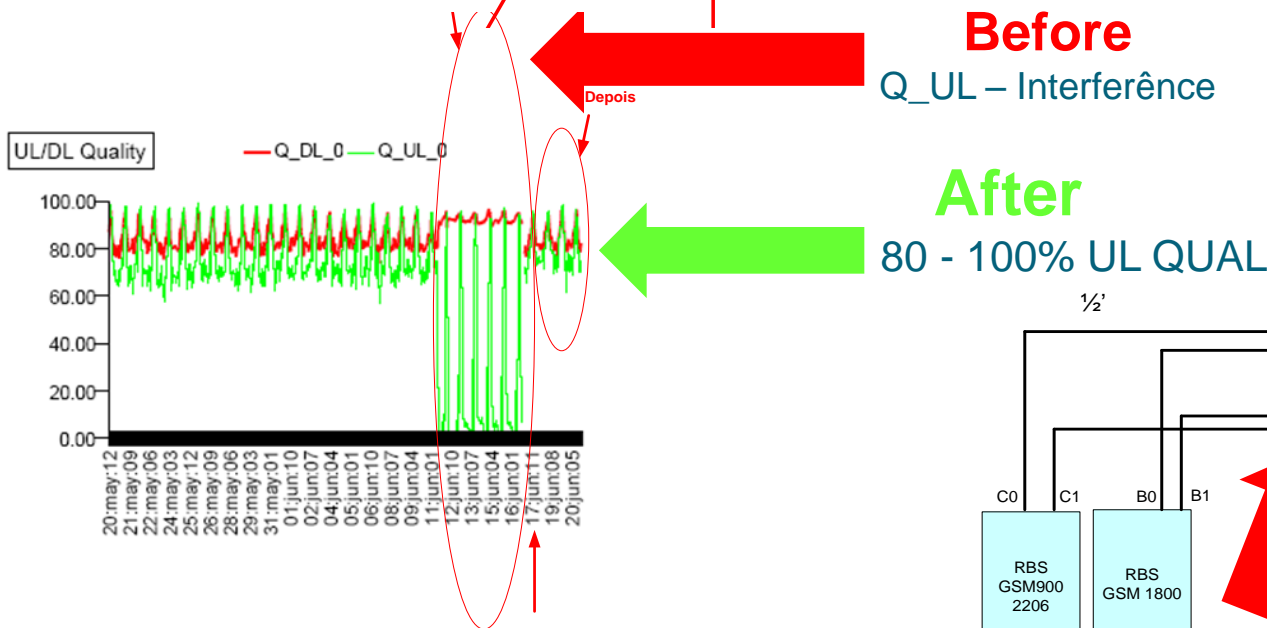

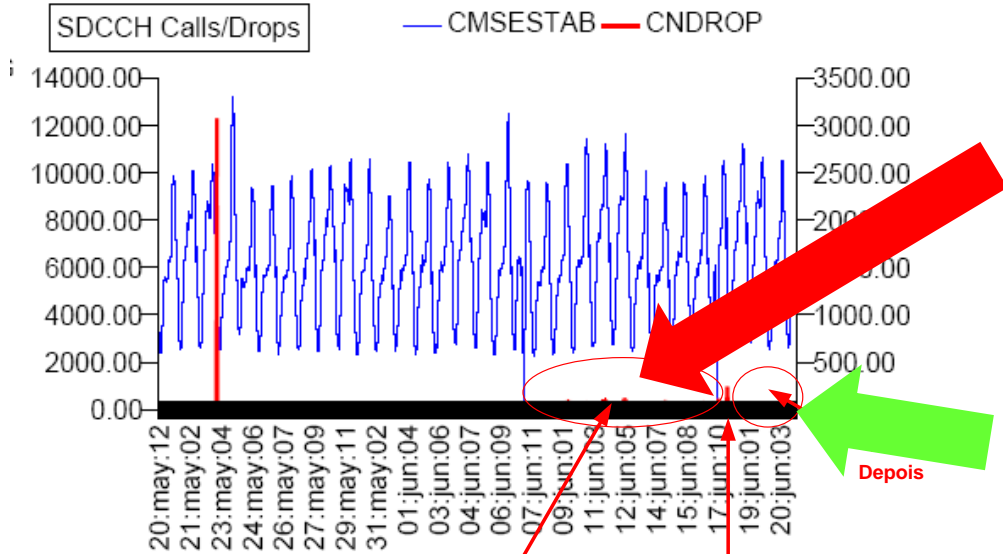

**After**  
0.4% Drops

**Before**  
IOI – Interferência On  
Idle  
45dB

**After**  
0 dB

# FINAL REPORT

## iQA Series Reports:

- Build final site report as you go
- No post processing of data required
- Output finished report from the iQA in .PDF format
- Screen shot “pictures” available for engineering reports

**ITC Report**  
RF system/component construction performance certification  
*SUMMITEK INSTRUMENTS*

**Site Details**

Site	Sector	Feeder	Operator/Company
SUMMIT 123	NA	NA	T Bell

**Test Parameters**

Tone1 Frequency (MHz)	Tone1 Power (dBm)	Tone2 Frequency (MHz)	Tone2 Power (dBm)	IM3 Frequency (MHz)	Pass/Fail Threshold
1945.0	-43.0	1990.0	-43.0	1900.0	-97 dBm

**Test Results**

Test Point	Time	PIM	PIM Peak	Result
PIM SOURCE	2010-07-08 10:02	-77 dBm	-77 dBm	Fail
LOW PIM LOAD	2010-07-08 11:36	-118 dBm	-118 dBm	Pass
ALPHA TX0 RX0	2010-07-08 11:56	-109 dBm	-107 dBm	Pass
ALPHA TX1 RX1	2010-07-08 11:57	-110 dBm	-114 dBm	Pass
BETA TX0 RX0	2010-07-08 11:57	-118 dBm	-118 dBm	Pass
BETA TX1 RX1	2010-07-08 11:58	-110 dBm	-110 dBm	Pass
GAMMA TX0 RX0	2010-07-08 11:59	-105 dBm	-105 dBm	Pass
GAMMA TX1 RX1	2010-07-08 11:59	-118 dBm	-117 dBm	Pass
